J. Biochem. 205:321-331(1992).
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.
-!- SIMILARITY: Belongs to the fetuin family.
-!- SIMILARITY: Contains 2 cystatin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Brown W.M., Christie D.L., Saunders N.R., Nawratil P., Dziegielewska K.D., Mueller-Esterl W., "The nucleotide and deduced amino acid structures of sheep and pig fetuin. Common structural features of the mammalian fetuin family.";

Suggested to have lymphocyte stimulating properties, lipid binding capability and to bind thyroid hormone.
-i- SUBCELLULAR LOCATION: Secreted.
-i- TISSUE SPECIFICITY: Liver and bone.
-i- PTM: Phosphorylated on serine residues.
-i- SIMILARITY: Belongs to the fetuin family.
-i- SIMILARITY: Contains 2 cystatin-like domains.
                                                                                                                                                                                                                                                                           TISSUE-Liver;

The nucleotide and deduced amino acid structures of sheep and pig
fetuin. Common structural features of the mammalian fetuin family.";
Bur. J. Blochem. 205;321:331(1992).
-! SUBCELIULAR LOCATION: Secreted.
-! SIMILARITY: Belongs to the fetuin family.
-! SIMILARITY: Contains 2 cystatin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to 70% of the chains)

SIGNAL 1 Potential.
713 Leucine-rich repeats neuronal protein 5.
                                                                                                                                                                                                                                                                                                                                       and mouse CDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- SUBCELLULAR LOCATION: Type I membrane procein (Potential).

-!- TISSUE SPECIFICITY: Oversamplified in mallynant gliomas.

-!- SIMILARITY: Contains 1 Ig-like C2-type (immunoglobulin-like)
            NUCLECTIDE SEQUENCE [LARGE SCALE GENOMIC DNA].
Human chromosome 1 international sequencing consortium;
Submitted (DEC-2004) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                                                                   -1- SIMILARITY: Contains 11 LRR (leucine-rich) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EMBL; AF030435; AAC39792.1; -; mENA.

-I-FUNCTION: Transcriptional regulator that acts as repressor or activator. Binds to Mar recognition elements (MARE). Play important roles in coordinating transcription activation and repression by MAFK (By similarity).

-I-SUBBNIT: Heterodimer of BACH2 and Maf-related transcription factors (By similarity).

-I-SUBCELDUAR LOCATION: Nuclear (By similarity).

-I-SUBCELDUAR LOCATION: Nuclear (By similarity).

-I-SUBLECTICITY: B-cell specific.

-I-SIMILARITY: Contains 1 BTB (POZ) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PROSITE; PSS0037; BTE; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ő
Opportunistic pathogen.",
Nature 406:959-964(2000).
-I- FUNCTION: This small ubiquitous enzyme is essential for maintenance and cell growth.
-I- CATALYTIC ACTIVITY: ATP + AMP = 2 ADP.
-I- SUBUNIT: Monomer (By similarity).
-I- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-I- SIMILARITY: Belongs to the adenylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PROSITE; PSO0113; ADENYLATE KINASE; 1.

Biocechnol. 22:1275-1281(2004).
-!- FUNCTION: Involved in saturated fatty acids biosynthesis.
-!- SUBCELLUIAR LOCATION: Cycoplasmic (By similarity).
-!- SIMILARITY: Belongs to the thioester dehydratase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    71.4%; Score 35; DB 1; Length 150; 77.8%; Pred. Nature 415:497-502(2002).

-I- FUNCTION: Part of a binding-protein-dependent transport system. Probably responsible for the translocation of the substrate across the membrane (By similarity).

-I- SUBCELLUAR LOCATION: Integral membrane protein (By similarity).

-I- SUBCELLUAR LOCATION: Integral membrane protein transport transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                              dust mite Buroglyphus maynei.";
Int. Arch. Allergy Immunol. 99:180-122 (1992).
-!- FUNCTION: Probable thiol protease.
-!- SUBCELLUIAR LOCATION: Secreted.
-!- ALLERGEN: Causes an allergic reaction in human. Common symptoms of mite allergy are bronchial asthma, allergic rhinitis and conjunctivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ਨੇ
Alpha-2-HS-glycoprotein homolog - mouse

Ny Alternate names: fetuin homolog; fetuin type trypsin inhibitor countertrypin

C; Species: Mus musculus (house mouse)

C; Date: 22-Nov-1993 #sequence revision 01-Sep-1995 #text_change 09-Jul-2004

C; Accession: S21094; D47408; A47408; E47408

fetuin precursor - rat

N.Alternate names: 59% bone sialoprotein; tyrosine kinase inhibitor

N.Alternate names: 59% bone sialoprotein; tyrosine kinase inhibitor

Species: Rattus norvegicus (Norway rat)

C.Bate: 12-Oct-1389 #sequence revision 12-Oct-1989 #text_change 09-Jul-2004

C.Accession: A32827; S22382; I55489; A40766; A33144

R.Auberger, P.; Palquerho, L.; Contreres, J.O.; Pages, G.; Le Cam, G.; Rossi, B.; Le

Call 58, 631-640, 1989

A.Title: Characterization of a natural inhibitor of the insulin receptor tyrosine ki:

A.Reference number: A32827; MUID:89354538; PMID:2766355
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Residues: 18-62, 'D', 64-92,'E', 94-287,'A', 289-353,'GPVA',358,'LCP',362,'RVRYFKI' <R', A;Cross-references: UNIPARC:UP1000012501C; EMBL:X63446; NID:956139; PIDN:CAA45042.1; R;Ohnishi, T.; Nakamura, O.; Ozawa, M.; Arakaki, N.; Muramatsu, T.; Daikuhara, Y. peroxidase ATP21a - Arabidopsis thaliana
N.Alternate names: protein F3A4.40
C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Date: 04-Peb-2000 #sequence_revision 04-Feb-2000 #text_change 09-Jul-2004
C.Accession: T45849
R.Bargues, M.: Collado, M.C.; Navarro, P.; Terol, J.; Perez-Alonso, M.; Mewes, H.W.; submitted to the Protein Sequence Database, December 1999
A.Reference number: Z23007
A.Reference pression: T45849
A.Status: preliminary
A.Molecule type: DNA
A.Residues: 1-329 cara
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Species: Sphingomonas aromaticivorans
C;Date: 11-Jan-2000 #sequence_revision 11-Jan-2000 #text_change 09-Jul-2004
C;Accession: T31121
R;Romine, M.F.; Stillwell, L.C.; Wong, K.K.; Thurston, S.J.; Sisk, E.C.; Sensen, C.W
submitted to the EMBL Data Library, July 1998
A;Description: Complete sequence of a 184 kb catabolic plasmid from Sphingomonas aro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cross-references: UNIPROT: 085830; UNIPARC: UPI000005C952; EMBL: AF079317; NID: 933782
